New polypeptide, useful for screening for modulators of cyclic nucleotide -gated ion channels, comprises the isolated cyclic nucleotide-gated cation channel 3 beta subunit. Claim 4; Fig 2; 83pp; English

The invention relates to human cyclic nucleotide-gated cation channel 3 beta subunit (CNG3B) polypeptides and polynucleotides. CNG3B is a member of cyclic nucleotide-gated cation channel (CNG) family. CNG3B forms cunctional heteromultimers with CNG41 and/or CNG43, two CNG alpha subunits that are expressed in retina. CNG3B polypeptides are useful for screening modulators of CNGs which are useful as contraceptives and for treating various disorders involving cation channels. e.g. vision disorders and male infertiilty. Polynucleotides of the invention are useful for transfection of cells in vitro and in vivo, to correct acquired and inherited genetic defects, cancer and viral infections. Sequences of the invention are useful as reporter molecules in assays and detection systems, to measure changes in cation concentration, membrane potential, current flow, ion flux, transcription, signal transduction, reporter-ligand interactions and second messenger concentrations, in vivo and ex vivo. They are useful to construct models of CNGs in a computer system and for examining expression and regulation of cation channels. The present sequence is a DNA encoding CNG3B protein

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain creation (PCR) primers, oligomers, and for chromosome and gene mapping.

C and in recombinant production of (II). The polynucleotides are also used in the production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed control of (II) are to treat disease states involving (II). (II) is cuseful for generating antibodies against it, detecting or quantitating a cuseful for generating antibodies against it, detecting or quantitating a cupplement. (II) and its binding partners are useful in medical imaging consupplement. (II) and its binding partners are useful in medical imaging consupplement. (II) and its binding partners are useful for treating disorders of involving aberrant protein espression or biological activity. The colonypeptide and polynucleotide sequences have applications in diagnostics, for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and can or oproduce other types of data and products dependent on DNA and amino acid sequences of the invention. Note: The sequence data for this coing sequences of the printed specification, but was obtained in celectronic format directly from WIPO at calculation of the printed specification, but was obtained in celectronic format directly from WIPO at
                                                                                                                                                                                                                               New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1336
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1456
used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorder, autoimmune/inflammatory disorder, developmental disorder, endocrine disorder, neurological disorder, gastrointestinal disorder, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp polymucleotide the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from MIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2224
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1037 ACAAAGCATATATCTACAGAGTTATTCGAACAACTGGATACTTGCTGTTTATTCTGCACA 1096

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a nucleotide sequences encoding human CCNC1, OCNC2, or betalb olfactory cyclic nucleotide gated (CNG) channel subunit, its action being an olfactory CNG channel activity modulator: A host cell which expresses human OCNC1, OCNC2 and/or betalb is useful in a mammalian cell-based assay for the profiling and screening of pututive modulators of a human olfactory cyclic nucleotide gated (CNG) channel. The method is used to identify a compound as one which particularly modulates CNG activity based on a detectable change in fluorescence. The test cell expresses each of the human oCNC1, human oCNC2 and human betalb subunits. A fluorescence plate reader or a voltage imaging plate are used to monitor changes in fluorescence. The compounds that activate olfactory CNG channel enhance smell and can be used to make foods more palatable for individuals with attenuated olfactory function. The present sequence represents the nucleotide sequence of hocNC1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGN) primers, oligomers, and for chomosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease steless involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food of sites expressing (II). (II) and its binding partners are useful in medical imaging of sites expressing (II). (II) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations in responsible for genetic disorders or other traits to assess produces the procession of propertice and polynucleotides or other traits to assess produces the procession of produces the produces are produced to a produce of the polynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2068

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as disgnostic or toxicity markers for the prediction or identification of the physicological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          677 CTCTTGCCTATAACTGGAACTGCTGGTTTATACCACTGCGCCTCGTCTTCCCATATCAAA 736

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel method for determining the intracellular concentration of cyclic nuclectides. The method comprises preparing a cell that expresses a CNG (cyclic nuclectide-activated) ion channel together with a photoprotein and detecting the intracellular concentration of cyclic nucleotides from the luminescent signal of the photoprotein. The method may be used to screen for receptor ligands and modulators of phosphodiesterase, guanylate cyclase or nitric oxide synthase, which would be potentially useful as pharmaceuticals. The method is suitable for high throughput screening, does not require radioactive tracers, has a high signal-to-noise ratio, is very quick, highly sensitive and inexpensive. The current sequence is that of the Norway rat cyclic nucleotide-gated ion channel 4.3 (CNG4.3) DNA of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Determining intracellular concentration of cyclic nucleotides, useful for identifying, e.g. receptor ligands and enzyme inhibitors, comprises using cells that express a cyclic nucleotide activated ion channel and a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    929

The invention relates to isolated polynucleotide (1) and polypeptide (11) sequences. (1) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (11). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed sectivity of (11) is useful in gene therapy techniques to restore normal cativity of (11) or to treat disease states involving (11). (11) is useful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating of supplement. (11) and its binding partners are useful in medical imaging of sites expressing (11). (1) and (11) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in cations of mutations and to produce other types of data and products dependent on DMA and to produce other types of data and products dependent on DMA and conding sequences. Assettly-AASS4164 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this coding sequences in the printed specification, but was obtained in the print of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GAACAGTGCCAGAGCAGAAGGAAATGGACCCCGGGAAAGAAGGTCCAAAACAGCCCACAAA

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed cortivity of (II) as useful in gene therapy techniques to restore normal cortivity of (II) to to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in issue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving abbrrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations capped and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in parent of the invention. Note: The sequence date for this

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1671
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1731
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01972). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         detection reagent for detecting 1000 or more for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1792 AACTGCAGTTTAAGCTGGATCTGCTGGCCCTTTCTTCCGCTGGAGCTATTGTACTTTAAAC

administering to a subject a composition comprising a compound that modulates a target gene or gene product, outside the blood-brain and/or blood-retina barriers. Treating central nervous system and/or eye disorders comprises

Claim 19; SEQ ID NO 1; 91pp; English

This sequence encodes the human cyclic nucleotide gated channel alpha 1 protein. This cDNA may be targeted in the method of the invention for treating a disorder of the central nervous system (CNS) and/or the eye.

CC Treating a disorder of the central nervous system (CNS) and/or the eye.

The method comprises administering to a subject a composition comprising a compound capable of modulating a target gene or gene product in a compound capable of modulating a target gene or gene product in a designed form to be introduced into the cells or tissue of the CNS or eye blood-brain or blood-retina barriers. The composition is in a cell blood-brain or blood-retina barriers. The application occurring outside the blood-brain or blood-retina barriers. The salso designed for systemic administration or for administration by iontophoresis, or for extrobulbar application or as eye drops. The compound, nucleic acid confected or useful for the preparation of a composition for treating, preventing and/or delaying a disorder of the CNS and/or the eye, e.g. related to angiogenesis and/or necvascularisation, retinal programment of pigment epithelium (RPE), neurosensory retina and/or choroidea and wet age-related macular degeneration (AMD) or diabetic retinopathy. The compound may also be used as a lead compound in drug discovery and preparation of drugs or prodrugs. The nucleic acid molecule and compounds, drugs and prodrugs for the treatment of the disorder mentioned above or for the identification and isolation of downstream genes, which respond to modulation of a gene comprising the nucleic acid molecule or cits encoded gene product. The method is used for diagnosing, preventing continears, headache, stroke, insomnia, alcohol abuse, entirely annesia, headache, stroke, insomnia, alcohol abuse, context anxiety, chronic pain, retinal blastome, primary retinal detachment or context anxiety, chronic pain, retinal blastome, primary retinal detachment or context anxiety contexterior.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a method of classifying a breast cancer patient according to prognosis by determining the similarity between the level of expression of each of five genes for which markers are listed in the specification, in a cell sample taken from the breast cancer patient, to control levels of expression for each respective five genes to obtain a patient similarity value. The methods are useful for classifying a breast cancer patient according to prognosis. Kits and computer program products are useful for data analysis using the diagnostic, prognostic and statistical methods of the invention. This sequence corresponds to a

```
The invention relates to isolated polymuclectide (I) and polypeptide (II)

sequences. (I) is useful as hybridisation probes, polymerase chain
reaction (PGN) primers, oligomers, and for chromosome and gene mapping,
and in recombinant production of (II). The polymuclectides are also used
in diagnostics as expressed sequence tags for identifying expressed
genes. (I) is useful in gene therapy techniques to restore normal
activity of (II) or to treat disease states involving (II). (II) is
useful for generating antibodies against it, detecting or quantitating a
polypeptide in tissue, as molecular weight markers and as a food
supplement. (II) and tes binding partners are useful in medical imaging
of sites expressing (II). (I) and (II) are useful in medical imaging
of sites expressing (II). (I) and (II) are useful in medical imaging
of solypeptide and polymucleotide sequences have applications in
diagnostics, forenise, gene mapping, identification of mutentions
responsible for genetic disorders or other traits to assess biodiversity
and to produce other types of data and products dependent on DNA and
considerations and application of mutentions and application of mutentions and application of mutentions and the produce other types of data and products dependent on DNA and

                                                                                                                                                                                                262
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention issetul in developmental biology and in elucidating cell signalling and cell-cell interactions in higher ewkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABB130511), expressed DNA sequences (ABL16176 and the encoded proteins (ABBS73737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

New nucleic acid encodes modified olfactory cyclic nucleotide-gated ion channels which exhibit increased sensitivity and specificity for CAMP and are useful to elucidate activities of proteins important in CAMP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  adenyl
                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid encoding a modified olfactory cyclic nucleotide-gared ion channel, where the channel comprises mutations which together impart increased cAMP sensitivity, decreased nitric oxide sensitivity and decreased calcium-calmodulin sensitivity. The invention is used to elucidate activities of receptors, G-proteins, phosphodiesterases, aden cyclases and other proteins important in cAMP signaling. The present sequence represents modified rat olfactory cyclic nucleotide-gated ion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 3027;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  36;
